Lucrarea de laborator #4

1 Obiectivele lucrarii

Cunostinte de baza privina arhitectura unei aplicatii mobile Cunostinte de baza ale platformei SDK

2 Scopul lucrarii de laborator

Realizarea aplicatiei TIC-TAC-TOE pe **IOS** Regim de joc Player vs Player. Regim de joc Player vs AI (Artificial Intelligence).

3 Mersul lucrarii de laborator

Drept IDE am folosit XCode. Ca limbaj de programare a fost folosit **Objective-C**. Aplicatia data nu este Cross-Platform. Aplicatiile nativ au un avantaj ca lucreaza mai rapid. Aplicatia este single-view. Deci va fi doar un singur view. El are urmatoarea structura.

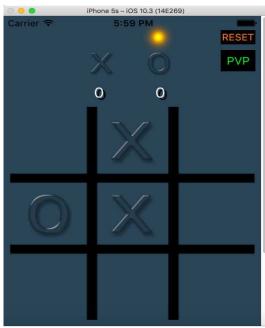

Screenshoturi din procesul crearii

```
#import <UIKit/UIKit.h>
                   @interface ViewController : UIViewController
                          IBOutlet UIImage *oImg;
                          IBOutlet UIImage *xImg;
IBOutlet UIImage *g_x;
                          IBOutlet UIImage *xm;
                          IBOutlet UIImage *OK;
IBOutlet UIImage *g_y;
                          NSInteger playerToken;
                          BOOL upd_status;
short win;
short step;
                          int a[9];
                          short score[2];
                         UIImageView *u[9];
UIImageView *v[9];
                          BOOL g_t;
NSString *winner[2];
short c[3];
                          int g_chg;
                   }
M25 - (IBAction)type:(UIButton *)sender {
        if (g_t == 0)
{
426
427
             [sender setTitle:@"AI" forState:UIControlStateNormal];
[sender setTitleColor:[UIColor colorWithRed:1.0 green:0.0 blue:0.0 alpha:1.0] forState:
428
429
                  UIControlStateNormal];
431
             score[0] = score[1] = 0;
432
             [self ResetBoard];
             g_t = 1;
433
434
435
         else
436
             [sender setTitle:@"PVP" forState:UIControlStateNormal];
[sender setTitleColor:[UIColor colorWithRed:0.0 green:1.0 blue:0.0 alpha:1.0] forState:
437
438
                  UIControlStateNormal];
             score[0] = score[1] = 0;
[self ResetBoard];
g_t = 0;
439
660
441
442
443 }
445 @end
```

Concluzii

In lucrarea data s-a creat o aplicatie mobila pe IOS. Insusi aplicatia reprezinta o joaca (Tic-Tac-Toe). Joaca suporta doua regimuri. Dupa fiecare joc cistigat - jucatorii acumuleaza puncte. Pe parcursul lucrarii s-a utilizat masina virtuala pentru a virtualiza sistemul de operare Mac OS Sierra. Ca IDE s-a folosit XCode 8.3.1. Au fost adaugate butoane de resetare a jocului, totodata dupa fiecare runda cistigata - se evedentiaza cistigatorul. In urma efectuarii lucrarii am acumulat multa experienta pe mobile, totodata am studiat sistema MAC si am invatat limbajul Objective-C.
